YOUR DESIGN SOULMATE

A few quick tips when measuring your space:

- Ask a family member or friend to help you measure. This will ensure accuracy.
- Give as much information as possible! examples: floor registers, built-ins, or anything existing.
- Make sure you are parallel or perpendicular to what you are measuring. If you measure at an angle your measurements will be inaccurate.
- Be sure to measure in feet and inches and round to the nearest 1/4"
- Laser measure tools are a great investment!
